Mysoftheaven (BD) Ltd. Expertise /Technology We Use

Mysoftheaven (BD) Ltd. Professionals are skilled in various tools & technologies.

Tools and Technologies:
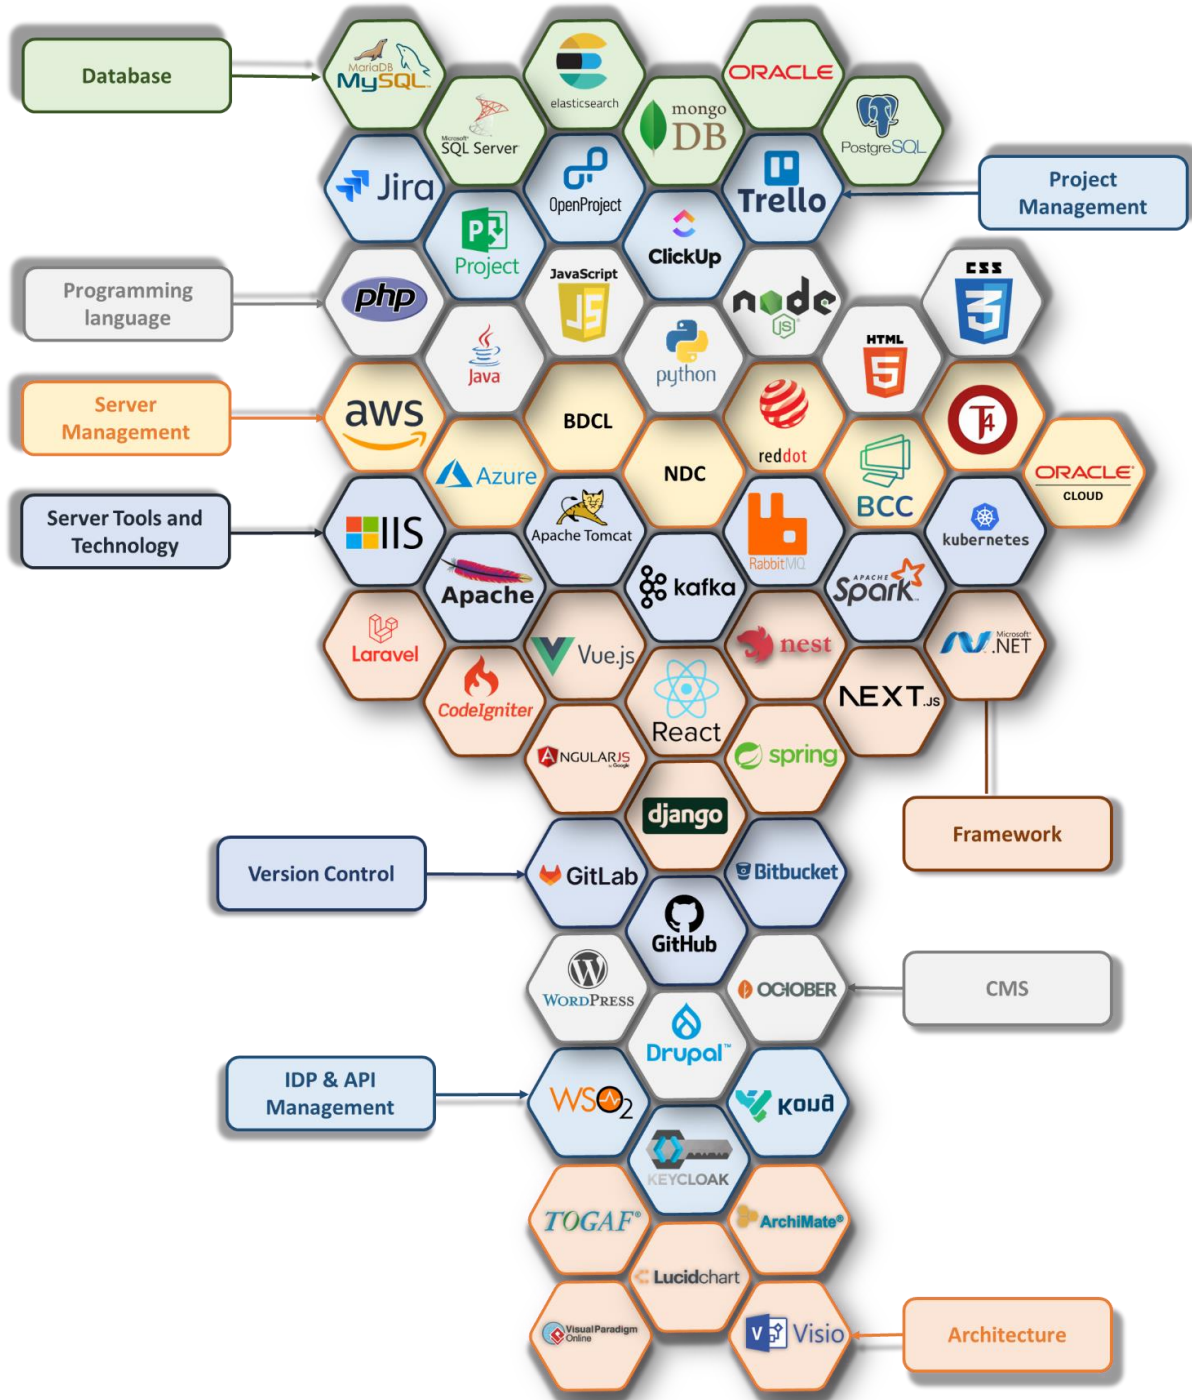

The following is a shortened list of the technologies more widely used:

Design Methodologies	UML, SSADM 4. M
Development Tools	Visual Studio, Developer X. X.
RDBMS	Oracle, MS SQL Server, DB2, My SQL.
Web Servers	Domino Server, Microsoft IIS, Apache Web Server, Web Sphere, Tomcat, Web logic.
Web Development Tools	Visual Studio.NET, C#.Net, VB.NET, ASP.NET, ASP, PHP, XML, PERL, CGI, Java, JSP, EJB, WAP, WML, WML Script, HTML, DHTML, Java Script. VBScript, CSS, Ajax.
AI Development Tools	Google Tensorflow, Microsoft Azure ML, Caffe
Distributed Computing	CORBA, COM, DCOM.
Operating System	Windows 9x/NT/200X, Linux, OS/400, SCO Unix, Linux
Languages	Java, C, C++, RPG, C#, Visual Basic, PHP
Document Management	Lotus Notes & Domino Server.
Other Tools	Dream Weaver, Visual Interdev, Cold Fusion, Microsoft Front page Express
Multimedia	Macromedia Director, Macromedia Flash, Macromedia Author Ware, Adobe Premiere, 3D Studio Max.

Technology Architecture

Presentation Layer	**JAVA, PHP, AJAX, HTML4, HTML5, CSS3, Bootstrap.**
Distributed Services	Web service
Application Layer	Windows workflow foundation, C
Domain/Business Model Layer	Domain Model C#
Persistence/Access Layer	Domain Data Model
Operating System	Windows 2008/2012, Linux
Web Application Sewer	Microsoft Internet Information Service
IDE	Visual Studio 2012
Language / Framework	PHP based platform with tool architecture like Bootstrap, framework like: CakePhp/Laravel/codeigniter can be used.
API Technology	API development is to standardized through JSON, Representational state transfer (REST) or RESTful Web services.
Future change scope	Future technology Change, iterative prototyping and agility in product design are the generic expectation.
Accessibility	Technology and all related design/data will be open to Client.
Development methodology (Security, Test)	We will follow any of the industry standard secure development methodology such as (but not limited to) Comprehensive Lightweight Application Security Process (CLASP) by OWASP etc.

	We will consider (but not limited to) common vulnerabilities such as SQL Injection, Cross Site Scripting (XSS) etc. We will undertake responsibility for Input Validation Controls, Authorization/Authentication Control and other security controls in place in both test and production environment of application.

Areas of expertise

01.	B2B and B2C Internet/Intranet Applications
02.	ERP solutions for small, medium and large-scale Industries
03.	Human Resource Management System
04.	CRM / Sales and Distribution System
05.	PDA based systems
06.	Mobile based systems
07.	Electronic Fund Transfer System
08.	Dynamic Report Designer
09.	Financial Accounting Package
10.	Branch Banking Solutions
11.	Inventory Control System
12.	Process Automation System
13.	Production Control System
14.	MIS of various types
15.	Decision Support Systems
16.	Banking Core Systems.
17.	IPhone Application.
18.	Mobile Application.
19.	Network Troubleshooting.
20.	Call Center.
21.	Web Application.
22.	Website Development.
23.	Machine learning and Data analytics
24.	Graphics Designing.
25.	Data Entry +Data Processing.
26.	Search Engine Optimization.
27.	Software Maintenance.

Software Resource

- ❖ LINUX Operating System
- ❖ Windows NT
- ❖ Oracle8, Oracle10, Oracle12g RDBMS with Developer/2000 & Designer/2000
- ❖ Office Suite
- ❖ Developer Studio (Visual Basic, Visual C++, Visual J++ and Visual FoxPro 5)

Methodology: Development

Mysoftheaven (BD) Ltd. follows industry accepted procedures and processes to ensure highest quality output for its customers. We have devised a 4D's (Discover, Design, Develop and Deliver) Methodology based on widely accepted Software Development Life Cycle (SDLC).

a)   Discover:

- ✓ Business requirements
- ✓ Software requirements

b)   Design:

- ✓ Use case analysis
- ✓ Prototype
- ✓ System architecture
- ✓ Application design

c)   Develop:

- ✓ Subsystem design
- ✓ Subsystem development
- ✓ Unit testing
- ✓ Integration testing

d)   Deliver:

- ✓ Alpha testing
- ✓ Beta testing
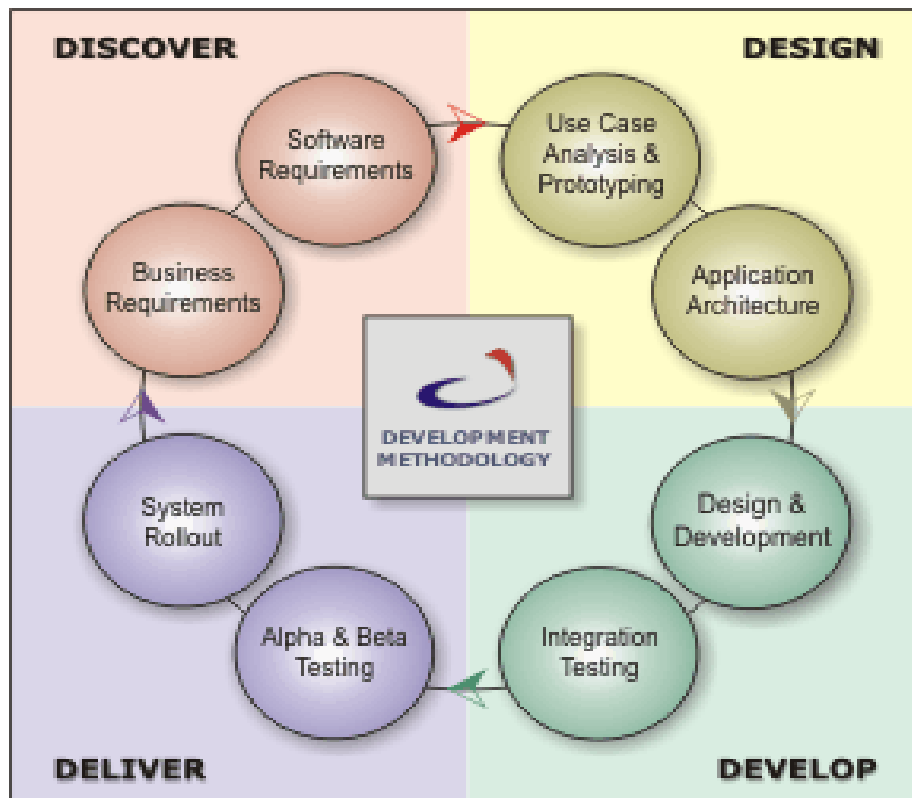

Software Development Capability

The Company has developed varieties of software for its clients, including large MIS (Management Information System) and Interactive Web Based Applications. We have trained, experienced, hardworking and motivated qualified professional who are capable to work under pressure.

At Mysoftheaven (BD) Ltd., we understand that Project success is directly proportional to project planning and phases of project development. Our Software Development Life Cycle (SDLC) differs based on the size, cost, time of each project so that it enables us to provide cost-effective and efficient solution. Top management personnel at Mysoftheaven (BD) Ltd. constantly review all the processes and make necessary changes according to the changing requirements and time. The phases of the SDLC followed by Mysoftheaven (BD) Ltd. are in accordance with the internationally accepted standards.
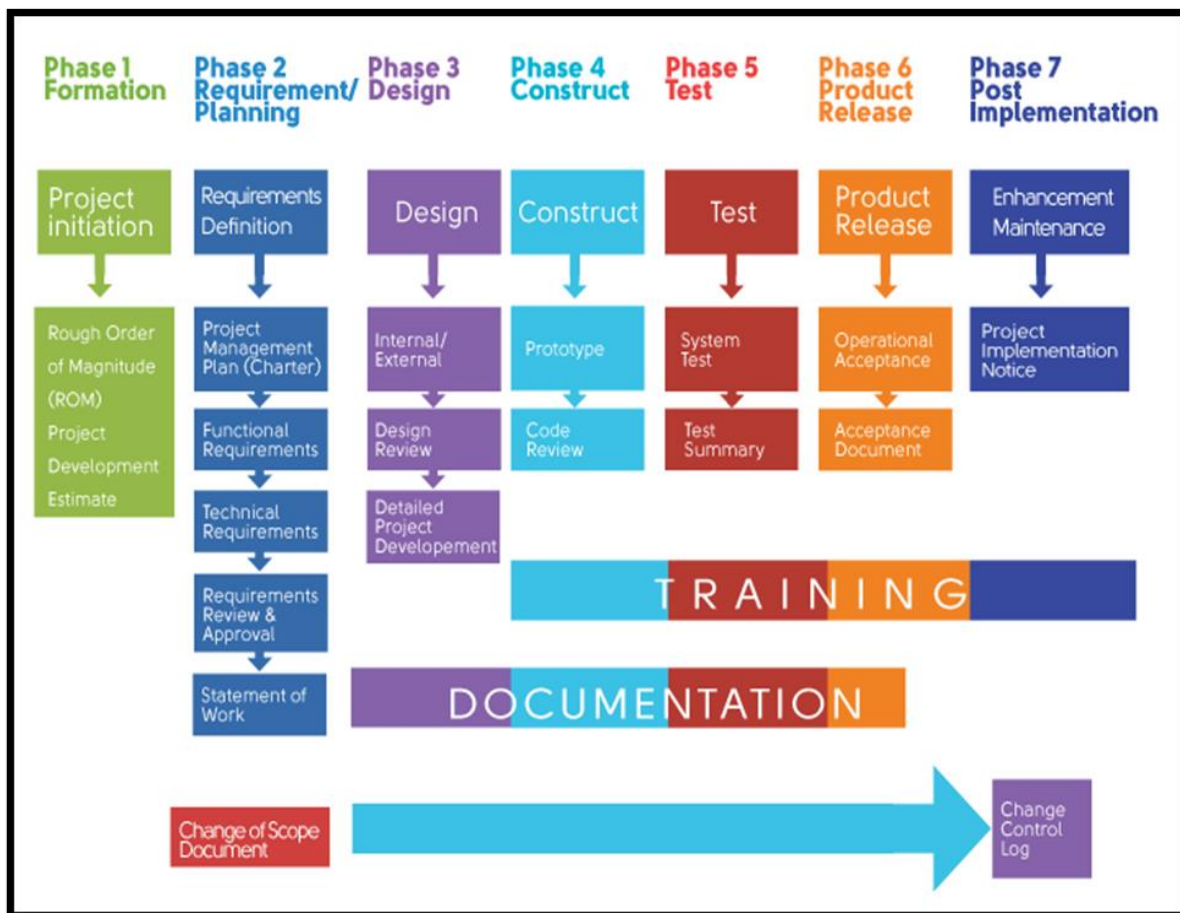

Mysoftheaven (BD) Ltd. Call center

Mysoftheaven (BD) Ltd. call center is a physical place where customer and other telephone calls are handled by an organization, usually with some amount of computer automation. Typically, a call center has the ability to handle a considerable volume of calls at the same time, to screen calls and forward those to someone qualified to handle them, and to log calls. Call centers are used by mail order catalog organizations, telemarketing companies, computer product help desks, and any large organization that uses the telephone to sell or service products and services. Call center services that consist of calls made by a company representative out to customers. Outbound call center calls are primarily telemarketing calls.

    - Lead Generation / Qualification,
    - Appointment Scheduling,
    - Setting Services,
    - Prospecting,
    - Promoting New Services or Products
- ❖ Credit Management:
- ❖ Verification Services
- ❖ Market Research
- ❖ Customer Satisfaction Surveys

Graphics and Multimedia

In today's world where competition is intense and knowledge is almost a religion one needs to ride the information highway to arrive in life. Communication in today's time needs to be innovative and representative of the company it is originating from. Therefore, no progressive organization can afford to have traditional mundane communication, new interactive multimedia offers immense potential to companies that wish to communicate very effectively and leave a lasting impression on their audience. We create presentations knowing that marketing is an important investment for you. We work in tight collaboration with your suggestions, your style and your budget. Our clients often come to us with a vision of what they wish to build. As designers, programmers, researchers and storytellers, we bring functional form to your visions.

Our Expert Designer Design the following things:
1. Software UI Design.
2. Image Masking, Clipping Path.
3. Brochure.
4. Web site Mockup.

5. Visiting & ID card.
6. IPhone Application.
7. IPAD.
8. Banner, Poster.
9. 3D Design with AutoCAD.
10. T-shirt, and cloths and related design.

Mysoftheaven (BD) Ltd. Training Cell

Mysoftheaven (BD) Ltd. has been committed in providing total client satisfaction on high-end Software, Embedded, Website, Portal, and Network & Telecommunication Design & Development. To stay on the cutting edge, we integrate today's most needed technologies in our training center. With TECHNIX training methodology there is no limit to what an individual can accomplish.

Mysoftheaven (BD) Ltd. provides certification training on all the leading technologies like: Java, C, C++, Visual Basic, MySQL Server, PHP, Apache Webserver, SQL, PL/SQL, Core Java, J2EE, Microsoft.net, GSM, GPRS, CDMA, Robotics, Embedded (Microprocessor, Microcontroller, Device Driver), Networking (LAN/WAN), Operating Systems (Microsoft, Solaris, Linux) etc.

Right from inception **Mysoftheaven (BD) Ltd.** has developed team of professionals who has Technical, Functional and Software development background with years of experience and tons of man-hours.

Placements: Our center provides placement assistant to those who have finished at least one project. Our company gets a lot of enquiries from the clients for placement and through placement cell one can take advantage of these enquiries. Also, one can register on our website which is made available to those who are in search of professionals on these technological platforms. One can have any number of interview calls till the time he/she gets a suitable job for his/her profile.

Reputation Facility: This is a unique, free of cost facility in which a person can repeat a module or entire course free of cost. This concept is unique because we understand that all the students sitting in a batch are not of similar caliber. We also understand that in order to become a professional one has to learn the technology thoroughly.

Projects: We are committed to spread technology to the common people. Time to Time we invite and entertain students from different colleges for vocational and summer training on live projects.

Custom Software Development
Custom software development is the oldest direction of our company activity. Through many years of successful work in this field we have accumulated great experience in implementation of the software projects of such a kind with different

labor intensiveness, science linkage and complexity level: starting from applications for small business process automation up to the large-scale enterprise management systems.

At the current moment our major custom software development service is **Ecommerce projects** creation. The essential features of this direction are high rates of functional standardization and our possibility to setup the application components designed by our developers. This let us successfully work at this rather competitive market as we managed to considerably cut production expenses (which are usually high at bespoke software development due to the necessity of most application components development from scratch).

Enterprise Management Systems Development

Historically, our second in turn (but not in priority) marketplace was large-scale **enterprise management systems**. Custom software development of such systems requires top professionalism mainly from business analysts and architects.

That is caused by high functional saturation and the necessity of applying complicated multilevel architectures to provide flexibility and scalability. Having gained wisdom by experience our analysts and architects are ready take almost any task and perform it successfully. Results predictability at any stage, as well as the process constancy, constitutes the second fundamental component of successful **enterprise level custom development**. After many years of work, we have chosen the best standard for the process practices and adjusted them to the conditions of our company by creating our own quite easy, flexible and reliable development process. Its skeleton, the Rational Unified Process (RUP), is free of extra formality, and its flesh, that adds the necessary flexibility to the process, includes many agile methodologies practices applied depending on the **project specifications** and **project team** structure.

Quite often **modified software development** of the corporate management system or its components includes migration from the legacy platforms. This is quite complicated process with a range of particularities

- ✓ necessity to involve appropriate platform specialists
- ✓ saving compatibility with the existing equipment to ensure step by step transition to a new system
- ✓ deep elaboration of migration process aimed at excluding possible data losses

Our specialists have firsthand knowledge of the problems arising during the migration process and have everything necessary not just to solve them, but to prevent their appearance.

Android Mobile application development

Mysoftheaven (BD) Ltd. is a leading custom android application development company which applies latest tools and technologies for custom android app development. With experience of nearly a decade, we are capable of designing and developing highly productive and fully functional android applications for any industry type. We have qualified experts for creating apps using Java programming language and android SDK (software development kit). Each of the projects of the development of the android application development goes through careful monitoring process where software's like debugger, external libraries, and database management systems help us in adding best of the features to the android application and turn them appealing for users. Apart from this, we use several other technologies include C, C++, 2D / 3D graphics application programming interface, and gaming engine. We also use gaming engine for building gaming apps.

IPhone Mobile application development

Mysoftheaven (BD) Ltd. Technologies is a nearly a decade old company in iPhone app development. It is familiar with how the device and app can together furnish flawless computing power to one's hand. These apps, without any doubt, have fascinated the entire world and indeed caused mass adoption of smartphone technology for general and business-grad computing operations. They are tiny but with the right approach, they can be tailored to replicate almost everything a desktop computer can do.

The young generation is living with iPhone and they know how powerful it turns out to be with the right set of apps. Of course, it's not limited to young generation only. People are using this device beyond age, gender and geographical boundaries as a powerful computer for a lot of their business operations, having fun on the go, playing video game and more.

Mysoftheaven (BD) Ltd. Technologies is one of the industry specialists when it comes to iPhone application development. It has been creating apps for almost every computable task the device can handle. At Mysoftheaven (BD) Ltd., we have been creating innovative, robust and all-inclusive iPhone apps since the launch of App Store in 2008. Every iPhone developer in our team has years of experience in serving clients from all over the world. They possess the required skills not only to offer high-quality solutions but to live up to expectation of clients.

Every iPhone application development idea goes through the well-defined process in which our experts work from the scratch and by their experience, convert it into grand reality. Our developers own the right set to skills and practical experience in the science and art of the creating apps. Each of projects, processed with approaches applied by us, entirely adheres to rules and regulation defined by Apple. Ours is one of the most systematic processed of iPhone application development that cover a lot

of things such as feasible study an idea, defining the required solutions and setting up them, study of SDK/tools, UI and prototyping design & development, testing and getting the final product approved.

Mobile Game Development

Mobile Game Development is different from conventional application development in the sense that it requires to bring together creativity, skill, imagination, technology and best user experience practices especially over the mobile platform which is quickly becoming the preferred choice for gaming. We design games that are visually exciting, addictive in nature and have the potential to attract users. Games developed at Mysoftheaven (BD) Ltd., display an underlying performance rich code backed with mobile friendly layout, making users want to interact more and more with the gaming ecosystem that we create.

Porting Games to Mobile

Mobile phones delineate the most stringent performance determining constraints like small screen size and lower processor speed than traditional gaming devices. Game development approach at Mysoftheaven (BD) Ltd. follows a mobile first principle where a game is first built for the mobiles and then ported to other platforms like the desktop and web. We also port games within the mobile platform itself like from Android to iOS and vice versa. Exploiting the power of mobile devices to create robust games and effectively porting to multiple platforms is our forte.

Designs for 2D & 3D Games

The very spirit of game development arises from the fact that gaming itself is our passion. They demand a captivating story, multiple levels, realistic environments and a complete vicarious thrill. Be it for a 2D or 3D setup, we take game development very seriously. Although 3D games are "in", we realize fully well that 2D games never really go obsolete and display immense experience in designing for both with the help of Photoshop, Maya and Flash. We create an enriching game experience through remarkable techniques of visual storytelling, game modeling, lighting, animation, audio engineering, User interface designing.

Why Mysoftheaven (BD) Ltd. Technologies

Bangladesh IT sector has doubtlessly proved itself. It offers unequaled IT capabilities. There are a number of Android app development companies In Bangladesh and we are one the leading among them. We are a totally professional Android app developer engaged in the industry for last 8 years. As our name itself suggests -- **Mysoftheaven (BD) Ltd**. -- we rapidly develop software at most reasonable rate. We have large teams of designers and programmers for creating a custom Android app and making it a store-hit.

We have thorough expertise in creating the most practical amalgamation of user interface and user experience and to do this, our team indeed goes extra miles to make customers satisfied. We have the right mix of experience, expertise and professionalism to handle any size of app-project. **Mysoftheaven (BD) Ltd**. Technologies, a leading mobile development company, has created more than 700+ apps so far as well as served to more than 500+ individual clients from across the world.

Our services are propelled by a team of technically sound experts. They are able to provide world-class skills for all sorts of android app development projects. They are able to create scalable apps as well as port them to other platforms too.

We are an ultimate destination for clients who want to outsource their android app development projects in Bangladesh. Here in Bangladesh, we have a full-fledged development center, backed by world-class infrastructure facilities and powered by the knowledge of highly competent people.

Remote Administration and System Integration

Now a days many companies are getting more and more distributed and flexible in order to expand their business interests and ideas, explore new marketplaces and capture new clients. Current computer networks both **local and global** are getting more complicated and difficult to keep up to date, protected and reliable. In such a situation expense for **IT structure enhancement** may increase greatly while you won't be quite satisfied with its quality, speed and number of available features.

Mysoftheaven (BD) Ltd. offers you **remote administration services** that will allow you to maintain computer network at the required level at a reasonable price. We propose a range of services in **remote administration and system integration**:

- o **Remote access (VPN):** Virtual Private Networks (VPN) is widespread at the moment as they provide connection with all of its users at the high-speed providing a number of additional services
- o **Email, Web, Data servers:** we assure the proper and stable work of your web and data servers

Anti-virus and anti-spam systems: protect your business with the latest and most reliable anti-virus and anti-spam systems that will stop all undesirable files with custom-configured filters

- o **Web hosting automation:** we are headed to develop software that would make managing your web projects easy. We are experienced in creating friendly interfaces with rich functionality **Security audit and consulting for networks, servers and services:** if you have any

doubts in your system's security, we will resolve them and find the best way out

- o **Technical support 24x7:** our specialists are at your service **24x7**, ready to answer your questions and give a detailed step by step instructions

Here in **Mysoftheaven (BD) Ltd.** we know how to perform **good network services** as we have been successfully working with clients from all the world and has established our own reliable system for large number of users working in the company.

Software Technical Support:

After many years of software development, we've gained experience in **technical support and maintenance of our solutions**. For us it's one of the most important stages of the project life cycle as from the very beginning we try to satisfy the customer's real business needs instead of simple specification implementation. When the product is completed, tested and put into commercial operation the period of the highest responsibility comes: it is necessary to respond quickly to the users' requests and to make deliberate decisions for preventing data losses and system malfunction. Providing **technical support and maintenance services** to our customers for a long time let us form a disciplined and responsible team of specialists. Later basing on this team we've managed to create our own direction, so now we don't just support and maintain our products, but also provide such services for the third parties' products.

As a rule, the major part of work performed by a team involved in software product support and maintenance includes **searching and fixing bugs**. In fact, this process totals 80% of the whole work required while supporting and maintaining a product. This task is closely interwoven with quality assurance and control of the software.

Actually, they are linked so inseparably that organization of communication between the quality assurance team searching for bugs and the development team fixing those bugs becomes the most important task for the support and maintenance project manager. We managed to solve this task for every project by uniting quality assurance specialist and developers responsible for the bugs fixing into a single support and maintenance department. The size of this department and their professional skills let us easily scale the teams for **solving support and maintenance tasks** of almost any complexity.

Software Upgrade Support

By tradition, the task of **optimization and upgrading** of the existing code is supposed to be one of the most difficult support and maintenance aspects. It can be compared only with the development of the new functionality for the existing system. These tasks become especially complicated if it is necessary to edit some **code written by a third party**. It often happens that **technical support documentation**

for the system which requires improvement, is absent or incomplete, so it takes analysts' and architects' titanic efforts to restore the complex view of the system architecture and functional features in order to continue working at its upgrade. Many companies give up facing such difficulties, but our specialists working in the support and maintenance departments will successfully solve them due to gained experience and high professionalism.

Staff Leasing

If you are an owner of the **information system** that requires some improvement or just have a **Ecommerce project** in mind and you already have a team of the gifted managers and analysts but no developers available the best choice is the **outsource staff leasing**.

Mysoftheaven (BD) Ltd. Team consists of the professional and experienced software developers. During the years of our work, we have successfully completed many projects in custom software development. While working with our clients we understood that renting account representatives makes good practice for us and nowadays this service includes providing various specialists for your projects.

At the current moment we can offer you leasing a software developer, quality assurance engineer, and Web Designer and system administrator. Another particular feature of this service is that you can lease a software development manager who will run the team of developers and/or an analyst.

Outsourcing Software Development

Outsourcing software development has certain advantages:

No office rent expenses

- o No extra staff expenses
- o Experienced developers with wide appropriate portfolios and skills
- o No full-time staff risks
- o Protection of your intellectual property
- o Full control of the development process via communications tools (Email, Skype, MSN, etc.)

When you hire your own outsourcing, qualified experts and developers to implement your project you do not need to train them and upgrade their skills.

IT consulting

Many years of software and applications development for our customers allowed us to grow up a united team of the highly qualified specialists who are constantly in progress and ready to explore new areas. Our company provides the whole range of **IT consulting services** and helps you to solve various problems that may arise

when a new project starts up or when you have an intention to improve the existent one.

Pre-project Analysis

One of the most important and ultimate software development stages is the pre-project analysis when the future software product or system features are determined. It's uneasy to undervalue this stage as it is critical for the whole project life cycle. Experience gained by our team gives us opportunity to provide Ecommerce project initial analysis due to the peculiarities of the technologies, platforms and components it will be implemented with.

Feasibility Estimation

Feasibility estimation is closely connected with the IT service mentioned above. Providing this service, we help you to define time and man hours required for the project implementation. As software development is uncertain in so many ways a great experience and deep knowledge is needed to predict all the efforts for the project to launch successfully. Our team possess long-time expertise in software project development and will help you to determine if the desired system can be designed and developed according to the specifications and what its price will be.

Software Specifications Development

If you have a great idea for the software product or would like to improve your management system, you'll need to create comprehensive and detailed software specifications for the development team. It may take you an amount of time and efforts if IT is not your main job. We provide this service for you to define requirements specifications for developers to clarify what they are expected to do and to achieve and for you to get the detailed system to be features description. Modern technologies make rapid software development possible although these technologies are extremely complex. But here in Mysoftheaven (BD) Ltd. we know how to pick the best frameworks, programming languages and plug-in.

Systems Architecture Design

Up-to-date systems vary deeply in their scale starting from the small business process automation up to the large-scale corporate systems that support hundreds and thousands of users. In the latter case system is required to perform high level of efficiency for multiple access, reliable data storage, rapid and precise data analysis. Large-scale system key point is the architecture design. We have wide experience in

systems architecture design and are ready to help you to design the workflow system of any complexity in the shortest time.

Machine Learning and Block chain Technology

To keep up with the modern world, our company has a Machine learning and Block chain laboratory where the brilliant minds working continuously to upgrade systems we are using for the clients and inventing as well as training new models for getting better results. The company's engineers create customized information architecture that powers everything from machine learning and natural language processing to block chain tools. Besides developing infrastructure for block chains, the company also offers consultation services that focus on how their products can maximize a block chain's potential. The software architects integrate personalized block chain and AI infrastructure with current business networks, in the process upgrading a business's infrastructure, servers and software that perform everything from supply chain monitoring to real-time data reporting. The data analytics team uses the models' data to provide resourceful data visualizations and report.
