CASE STUDIES

GEO, AGRO & ENERGY

ACI Limited is one of the largest conglomerates of Bangladesh- operating in pharmaceuticals, consumer goods, and agro business. The project we worked with ACI is intended to leverage geo-data to gather, target and propagate relevant information to farmers when they need it, in a viable way.

We have developed a decision support system (IDSS) through software integrating field data, satellite and weather data and market information, and translate into actionable localized crop specific advice and guidance for farmers to improve the profitability of their farming operations.

By leveraging geo-data, the Fosholi app is able to guide small farmers to utilize their harvest effectively. Not only that, now crucial information such as what crops to plant and harvest and weather conditions and market prices are all accessible to local farmers from any device

#ML #AI

Synspective Inc. is a Japanese satellite service provider. They provide solution services with satellite data, and development and operation of small SAR satellites. The collaboration with Synspective was initiated through our partners from Japan.

We have assigned a team of 4 developers to create the software side of the flood analysis satellite service. Our team has created the IoT based software in around 6 months, that shows how much of the property and assets have been affected or damaged by any flooding of the premises.

As many areas in Japan are prone to flooding, damaging agricultural and fragile goods- the flood damage analysis satellite services have given the opportunity to businesses to assess and protect their goods. As a result, now these businesses are able to proactively take measures against flooding in their areas.

#IoT

Unipet is a petroleum company established in 1997 from Trinidad and Tobago. It began trading transportation fuels in the year 2000 and is now engaged in the marketing and wholesaling of liquid petroleum fuels. The company required a solution of high scalability - both horizontal and vertical, to cater their various services.

We are implementing a custom development solution called Convenience Pay (CPay) using Microsoft Azure cloud for Unipet. The CPay has been designed to automate the payment of their microservices, and is easy to scale up and scale out automatically. We are also providing consultancy services to help Unipet take full advantage of the automated CPay system.

There are over 24 gas stations of Unipet all over Trinidad and Tobago, along with their GStore, Unipet's retail goods chain. With CPay, Unipet automates the payment option for gas, petroleum, and goods from GStore- which is a big help for fleet management and transportation businesses. Now these service providers can directly transact with Unipet, with the ability to exchange goods of equal value through the app as well.

#Microsoft Azure

STARTUPS

The Cambridge Heartwear app is an app of wearable heart monitoring devices that collects data like ECG and heart rate, temperature etc from the device realtime. The startup is from Cambridge, UK- where we have been assigned by its Bangladeshi-born founder.

We created a health data monitoring technology with real time data, cutting-edge artificial intelligence able to deliver immediate results. The app gathers real-time sensitive and specific data of the heart's rhythm and streams it wirelessly to 'the cloud'. This data is instantly diagnosed by Artificial Intelligence using powerful algorithms and fed back via app.

The Cambridge Heartwear application is designed to offload the burden of cardiology departments; sensitive and specific data is gathered and analysed in real-time without the need for specialist assessment.

#ML #AI

Meed is the world's first digital banking club, where membership gets you access to state-of-the-art mobile banking from the USA. This project started with a sole Node.js developer provided by Brain Station, which soon grew to us taking on the full development of the app.

With a team of 30 developers, we delivered the Meed application in under 4 years. The Meed application solution has all banking features of saving accounts, secured credit-line, Meed Visa card, and full-on digital banking support.

With Meed we build an entire financial ecosystem from the ground up to help Meed cater to their clients in the best manner possible. In the app we linked credit, savings, and checking accounts under one system, and also built functionalities for both domestic and international transfer along with Meed specific functionalities.

#Ionic #MongoDB #Node.js

Rehive is a platform and toolkit for building fintech apps. We were tasked with building a toolkit for the startup so they can easily implement fintech solutions according to their customer needs- with the latest fintech integrations like eKYC, blockchain, digital wallet, and so forth for the frontend part.

A platform to build a fintech solution the fastest and easiest way possible. As a result Rehive can deliver hassle-free fintech solution experience to their customers with little development time and cost effectiveness.

With the Rehive application the company can create, manage, and scale fintech applications as per requirements. Now many third-party financial institutions have created and launched their fintech application in record time by using the Rehive platform.

#React Native #Angular #Postgres #Django

AUTOMOTIVE

Nissan is one of Japan's top enterprises and a leading car manufacturer around the world. We at Brain Station were tasked to build an AR car customizer app for their Middle East division, to bring in a new level of engagement to the car buying process.

For Nissan we have developed an augmented reality mobile application powered by Unity. Through this application, users can spec their Nissan model of choice to their liking. The whole vehicle is projected through the app in AR, bringing new depths of car customization for the brand.

The AR application has new levels of engagement for the customers of Nissan. Now users can customize and see how the vehicles will look in the real world through the AR application, and thus can spec their real life Nissan according to those specifications.

#Unity

TEQ project came as an opportunity to us via Gture, our partner in Norway. Then we estimated the work volume and submitted our estimates. Then we started working on it. The TEQ project is a hub that brings the Norwegian bus transportation and renting services to the digital platform.

The TEQ project has been in development since 2016, with a team of 16 people. The goal is to create an intuitive fleet management solution for the customers of TEQ to be able to see their bus services, track their transportation, and even rent them through digital portals.

The TEQ project is designed to bring the Norwegian bus services to the digital platform. With this, getting transportation services will become much easier for the residents and can access additional services through TEQ.

#AWS #Django #Python

Toyota is a leading Japanese car manufacturer and one of the largest automotive enterprises in the world. Toyota required an AR powered digital car manual for their Middle East division, so that customers can view the details of their vehicles using the mobile app.

We have developed a digital owner's manual by implementing an augmented reality solution powered by Unity. The users can point their camera at objects in the vehicle and the app will show details and features of the object in real time.

With the digital owner's manual, Toyota has introduced a new level of interaction with their customer base. The app can pull up various information of the vehicle and as well as showcase the latest offerings from the manufacturer.

#Unity

RETAIL

We had the opportunity to work with Nath from Spain, a clothing brand which designs and develops styles based on the latest fashion trends that suit the market needs by always following their own manufacturing. For them we developed an ERP system that facilitates automation across their various activities.

Nath needed a solution where they can manage all their sales, purchase, POS, E-commerce and other functions in a systematic way. Our Odoo powered ERP solution was the right tool to automate these activities, as a team of 8 ERP professionals of ours have been serving Nath since 2019.

With our ERP system, now Nath can record and manage data in one platform. Plus one of the biggest impacts of implementing ERP for Nath was the automation of processes such as purchase and inventory management. All their sales are recorded in one platform, and being updated accordingly by the system itself along with restocking of inventory.

#Odoo

Tanin Group is a manufacturer and supplier of plastic molded furniture for different industries like the service industry, education industry, healthcare industry, etc. For Tanin, we developed a full-fledged ERP system to automate various processes.

To help Tanin with their business, we provided them a solution that combines different modules according to their exact need. Our HRMS module helps them to manage their human resources, whereas modules like sales, purchase and inventory were merged to eliminate the manual process of data entry and stock updates.

Now Tanin has a fully automated manufacturing system that is linked with their HR and Accounting departments through the Odoo powered ERP platform. Now the ERP platform acts as a centralized hub for Tanin's manufacturing process, automatically recording sales and sending requisition orders.

#Odoo

OTOBI is one of the leading furniture retailers of Bangladesh, having modern manufacturing capacity, innovative designs & one of the largest distribution networks. Otobi needed a solution where they can manage all their HR functions in a systematic way.

We used Odoo to develop the ERP solution for them as we have the best developers working on this platform for a long time. After the implementation, users can generate all kinds of required reports and data with a few clicks, automating the whole HR process.

With our ERP implementation, now Otobi has a fully automated HR system. Now the HR manager has access to a platform that has all the necessary information of an employee-managing their payroll, promotion, expenses, bonuses, vacations, and so forth.

#Odoo

EDUCATION

CrueSpace is an online training and job placement platform. The goal of the platform is to create job opportunities for its users through their LEARN, CREATE, EARN program. We were given the task of creating the LMS platform of Cruespace.

We developed CrueSpace's LMS platform using Moodle LMS. With Moodle, we have built the LMS platform the way they needed it, with the right software integrated to it. As such learners can access online course materials and live workshops.

Our LMS solution for CrueSpace has created an intuitive learning space for professionals enrolled in the program of CrueSpace. Now learners can access remote learning and workspace, and participate in live sessions held by CrueSpace- having all their learning materials and progression under one comprehensive platform.

#Moodle

Student2Student (S2S) is a student-led volunteering initiative designed to ensure any student in Trinity can get information and support from another student. We developed an online for the initiative to facilitate their business,

We develop a web application for students to buy & sell used books. The application comes very handy for buying & selling as students need to just register for an account to do so. Students can register & post the books online defining contact methods.

This web application helped various students in the college get access to their required books without the hassle of dealing with any middle man. And thus gathering and exchanging books between the students have gotten easier thanks to Student2Student.

#MySQL #PHP

The Institute of Business Administration (IBA), University of Dhaka, is the pioneer in rendering business education in Bangladesh. It is also the leading business school in the country. Commitment to the highest educational standards distinguishes IBA among the educational institutes in Bangladesh.

During the first instances of the COVID-19 lockdown, it was apparent that IBA will be needing an LMS system for them to continue their classes. So we developed their LMS platform, powered by Moodle, so they have all the necessary tools to conduct their online classes and education from one platform.

One thing that has become very apparent with the COVID-19 pandemic is the dependency of online platforms to carry out day-to-day organizational tasks. With our Moodle powered LMS platform, now IBA has an effective educational platform to carry out their activities amidst circumstantial boundaries.

#Moodle

ECOMMERCE

MyShopDistrict is an eCommerce store in Italy where local stores can sell their goods online. The project started from nopStation, our eCommerce subsidiary partnered by nopcommerce. MyShopDistrict was able to source everything needed to get the eCommerce platform running from the nopStation site.

Our team of eCommerce professionals of nopStation delivered the eCommerce solution under 7 months. We developed the website as well as the mobile app which helps them onboard vendors and customers to the same platform. The platform also has geo-tracking and OTP SMS functions.

MyShopDistrict has enabled local vendors and shopkeepers in Italy to conduct business throughout COVID-19. As state-wise lockdown was in effect in countries around the world, many businesses opted for moving to an eCommerce platform- bringing them to the new age of digitalization.

#nopCommerce

Apex is one of the most popular shoe retailer brands of Bangladesh. Previously their e-commerce site was built on the custom asp.net solution. They faced a lot of problems with the existing site like performance, inventory management, discount management, a payment module, shipping module, website graphic and many others.

Apex needed to migrate their website to nopCommerce. We start the migration from scratch based on nopCommerce 4.1. We integrate the POS system, New payment method (local vendor), new shipping method(local vendor), discount from the ERP, product price and quantity sync from the ERP and the most important is the performance of the site.

The whole system is automated. Admin just had to add the picture of the product, except this, everything is automatic that means from the product sync to confirm order, order status update all are automatic. Now their e-commerce site is able to handle a huge customer base without any performance penalty.

#nopCommerce

Community Natural Foods is a Canadian supermarket providing natural and organic food at a great price. The supermarket is based out of Caligari and has a loyal following of customers who prefer alternatives to artificially enhanced food products. As they had no online presence, we were tasked to create an eCommerce web platform for them.

Our eCommerce team developed their website which helped them to create a loyal customer base for their products. Now they can serve a huge number of customers at a time and also can on-board 35% more clients than before.

With our eCommerce solution, Community Natural Foods now have an established online presence where they can engage and cater to their customers in the digital medium. The eCommerce web solution has generated over 15% higher conversion rate for Community Natural Foods as of late.

#nopCommerce

SOFTWARE/ITES

SoftwareOne is an IT service provider from Switzerland, helps customers optimize all aspects of their software portfolio, leveraging the extensive technical and commercial expertise and strong knowledge of and relationships with all main software publishers.

To maintain such an amount of account track they were in need of an enterprise solution which we provided them according to their requirements. We developed a small Enterprise solution for SoftwareONE which has Employee Time Tracker, HRM, PMS and CRM in it.

With that, the Swiss enterprise now has an internal tracking system for activities, employees, and accounting- automating miscellaneous activities for the company and generating automated reports and tracking with just a few clicks.

#Odo

We have been recruited for this project through our Norwegian partner, Gture. Webcruiter is a professional recruitment portal for Norwegian businesses, where CVs of professionals are circulated to the best matching job vacancy or recruitment.

The .NET based project was completed in around 4 years, by a team of 4 developers. The solution was developed for either businesses or professionals to create profiles to upload and go through CVs and recruitment processes online.

We developed such a web application through which over 65,000 users from 50+ countries connected to WebCruiter. The language-independent online recruitment application meets the needs for process support, provides quality assurance and makes the customers' working day simpler and more efficient.

#.NET

IOTIX deals with a cloud-based IoT platform that offers real-time data collection and analytics from sensors. This project has come to us from Gture, our partner in Norway. We were tasked to make their solution scalable, maintainable to develop future functionalities and to ensure stable growth.

The IOTIX project has been running since 2020, with 2 IoT experts at the helm. We are providing services for development, DevOps and maintenance of the IOTIX realview platform; also building an interface that displays all the data collected.

Our IoT solution has enabled IOTIX to utilize their sensors in order to record data for their clients, and present them in a meaningful way. The intuitive dashboard we developed displays all the data recorded and historical logs for the clients of IOTIX.

#IoT

REALESTATE

AreasInteractive is a Canada based team devoted to the real estate marketplace for over 25 years. They have a marketplace named CondoNow. We developed CondoNow to bring condo shopping to the digital platform. Also they are our first customer & we started working with them since 2006 & still serving happily.

Slow and complex condo shopping was a huge problem to scale their business. We helped them by developing an online marketplace which helped them to reach more customers in one place. The whole project was done in the .NET environment.

We developed such a marketplace for Canadian real-estate groups with which buyers & investors can get info of over 3000 real-estate agents. Buying and selling condos thus have become fast and easy for developers, agents, buyers and sellers together.

#.NET

Pbazaar is one of the renowned real estate agencies in Bangladesh. Our project with Pbazaar came from Pbazaar themselves, with the aim of being the first real estate company in Bangladesh to adopt reality technologies.

The whole augmented reality solution for Pbazaar was delivered in 3 months by 3 reality technologies experts. The AR application was designed for the clients and potential leads of Pbazaar to customize their apartments from their smartphones.

With our AR mobile application, Pbazaar had brought in a new avenue of engagement in the real estate industry of Bangladesh. Now their audience can customize their apartments and interiors from the phones and Pbazaar has been able to cultivate the engagement to clients from potential customers.

#Unity

CO-Well is one of the top IT service providers situated in Japan. Through our Japanese partners, we received the project from CO-WELL, where the company wished to create an AR mobile app for the real estate industry.

The project was completed in 3 months by 5 of our reality technologies experts. CO-WELL's AR solution is based on our Reality 23 solution, a mobile application that lets users customize their apartment designs and interiors.

With our AR solution, now CO-WELL has a ready-made application they can offer to real estate companies in Japan. The AR solution helps users to customize apartments and building interiors, helping real estate companies capitalize on the engagement.

#Unity

TELECOM

One of the UK's top telecom service providers is British Telecom, or BT. This project tasked us to develop a customer facing web portal which handles BT's integral business activities and handle the customers from the UK and Ireland

For BT we developed a customer facing website and portal. The application receives huge orders each year and we helped BT to process their whole order journey; using AEM for the large enterprise sector. We helped BT Group with the infrastructure and development support.

Now each year the website portal brings in over 50 million pounds worth of revenue for British Telecom for their products and services. And we have streamlined their whole order process journey to make it convenient for customers, and also for British Telecom to keep track of their database.

#AEM

Telenor is the world's leading telecom company. Based in Norway, the company is currently operating across Scandinavia and Asia with 22,000 employees- catering to 172 million customers. We provided a solution to sell licenses for Microsoft products like Office 365.

We developed Reseller based web API & Client services to contract with Microsoft to sell licenses for Office 365. This solution tracks subscription to the products, giving application insights and activity logs, and application events using cloud computing solutions.

The team started working for Telenor Cloud Services and has delivered the project within the shortest possible time. With a very high performing service record with Telenor Cloud Service Team. The team supported Telenor Cloud Service to grow their business even bigger & better with time.

#.NET

Banglalink is one of the pioneer Telecom server operators in Bangladesh serving the nation from early 2005 to till now. To align with the Government of Bangladesh "Digital Bangladesh" Banglalink played a vital role that aims to enable its customers to get the best out of the digital future.

We have built Banglalink MyBL App and Website. With this MyBL App, essential services like checking balance, dues, usage history, latest offers and much more are now available at the palm of the customer's hand. This app is designed to accommodate over 150 million users, as such we prioritized a user-friendly experience when accessing any services through the app.

The MyBL App and website is built with a new user-friendly interface. With a more organized new interface, customers can easily find all the offers and services at one place. Thus helping Banglalink cater a satisfactory customer experience for their users.

#Swift #PHP #React

BIOTECH & PHARMA

UNION VILLAGE

Scoreboard For Life is a solution for Union Village- an USA-based health service provider company to help the senior citizens of the USA. It's the first integrated health village native mobile app in the United States that we are proud to have developed.

The Scoreboard For Life solution consists of a customer facing website and user friendly cross platform mobile app with unique custom features. The application has been developed on AWS cloud platform to streamline development and host the app in a flexible platform. The app is designed for users to keep track of their medication and fitness activities, and also get in touch with their caretakers.

With Scoreboard For Life, the elderly now can take care of themselves by following the numerous activities given to maintain their physical health. Also this app is a quick platform for the elderly to get in touch with their healthcare professionals or caretakers to further assist them and maintain their physical needs.

#Cross-Platform #AWS

abbvie

This pharmaceutical enterprise is a top American pharmaceutical enterprise and a Fortune 100 company. So it was very prestigious for us that we were able to work with an enterprise of such caliber who came through our German sister company, Brain Station 51.

The project for the pharmaceutical started with only 4 people in 2018, which soon grew into a team of 30 as the company grew very satisfied with our services and opted for many of our solutions. With our AEM CMS services, the company also enlisted us to build their LMS platform for healthcare professionals.

Customer facing websites and portals with AEM have helped the pharmaceutical enterprise to cater individually to millions of their users. Already 6 live sites and portals are existing- the solution helped to automatically update sites and portals of the pharmaceutical company without any manual updates. All these in turn help the pharmaceutical company to showcase their work faster and seamlessly to win more business.

Galápagos

This pharmaceutical is a clinical-stage biotechnology company specialized in the discovery and development of small molecule medicines with novel modes of action from Europe. Their project came to us through our German counterpart, Brain Station 51, where we went through vigorous Q&A and presentation sessions.

With a team of 35 professionals we set out to work on building the pharmaceutical's CMS system in 2020. The AEM powered CMS system is designed for the commercialization market in five new European countries with another pharmaceutical company. Two different therapeutic areas for commercialization and related countries Germany and UK will switch between the two pharmaceuticals.

We developed responsive websites & portals which are relevant, up-to-date and with which this global pharmaceutical player is showcasing their works. As the company has expanded to five new countries, the CMS portals play a crucial role in showing the country-wise contents of different therapeutic avenues.
