" Low-Cost Dedicated Offshore Team for Your Online Works "

About Us

Current Employees : 30

Worktrooper is an innovative company that focuses on providing premium offshore services to help businesses of all sizes. We work to provide low-cost offshore teams to assist with business process management and online works. We're passionate about what we do and how we provide our services to our clients, and we take the time to listen to the needs of our clients.

We have found that many companies spend a fortune on online manual tasks within various regions because of high salaries and wages. Since we operate in

Bangladesh, we can provide a dedicated offshore team to make it easier for you to get a lot of work done at a lower cost.
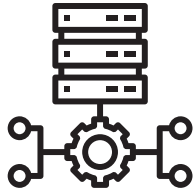

Our cost-effective approach allows companies to work productively online. While much technology has increased by leaps and bounds throughout the world, human intervention is still a necessity for work to be done correctly. The time and effort companies overspend on the wrong people are what cause many businesses to suffer in terms of productivity, strategy, and decision making.

SUCCESS STORIES -

❯ Uploading Offline Invoices and Statements Into Software and Back-End Systems

How does it work?

Understanding how things work is an essential step in how we assign the right people for your company. While we don't need to know the ins and outs of your daily operations, we do need the essential information for the project you need us for. This will help us find the right people for you.

01	02	03	04
Getting Trained	**Strategic Planning**	**Team Allocation**	**QA & Daily Reports**

» Your team manager will need to gain a full understanding of the goals and objectives of your project since we'll be part of your daily operations, its essential to us to make your objectives our highest priority.

» Once we know your goals and objectives, your team manager and team members will train on the tasks you need us to carry out daily for the service you want. At this stage, we prefer to keep everything documented with your permission. This can be recording screen shares on how to perform basic tasks or word documents that include written instructions of the whole operations. This helps us to refer to it to keep every detail followed to your specifications.

» Once your team manager gets trained, we then set a strategy, daily goals, and standards of quality/quantity of the deliverables for your project.

» Moving forward, we handpick dedicated team members that are the best candidates to work on your project based on their skills and experience. Also, we keep extra team members on backup to fill for any primary team member that's unable to perform their duties due to unforeseen circumstances. You will have direct access to your team members, which gives you complete control of the project while we supervise on our end.

» All our team members are held accountable for the quantity and quality of their work. Our separate Quality Assurance team will randomly check work that's in progress to make sure all work is of top-notch quality.

» Finally, your team will send a report on the progress made each day. This will keep you updated as we stay on top of all daily communications.
